

scalp micropigmentation

Thank you for your enquiry.

A Foli Sim team member will be in touch with you shortly via your preferred method of contact. In the meantime, we have compiled a small selection of key information to help you better understand our SMP services.

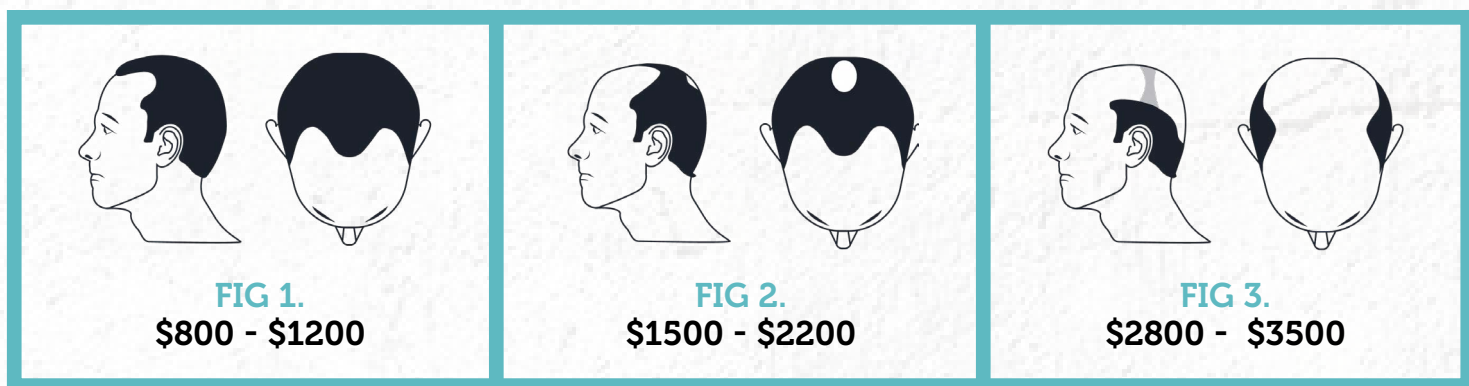

What is Scalp Micropigmentation?

Scalp Micropigmentation (SMP / Hair Tattoo) is a natural looking, non-surgical solution to hair loss. When delivered by a highly skilled artist, SMP gives you the appearance of greater thickness and natural-looking density by using specialised equipment to apply tiny dots of pigment to the scalp. These dots replicate the natural looking follicles and is an effective way to restore receded hairlines, cover thinning areas and camouflage scalp scars.

How much does SMP cost?

The cost to complete SMP will depend on the pattern of hair loss, the size of the area to be treated and if any scars are present.

Here is an approximate guide of what you might expect to pay:

The consultation takes approximately 20-30 minutes depending on your questions. Please note, we also have phone or video consultations available for your convenience.

Alternatively, if time is an issue you can send us your images and we'll send you a written quotation based on those images.

Images can be sent to us by:

Email: info@folisim.com.au **WhatsApp:** +61425869926

We hope this helps to answer some of your questions for now. Please let us know if you would like more information or to arrange a suitable time for a free phone, video or in-person consultation.
