

FAQ's

DOES SMP LOOK **NATURAL**?

Yes! We use specialised pigments & equipment designed to replicate the appearance of your natural hair follicles. Our artists colour match the pigment to your existing hair & skin tone, tailoring the procedure to suit your desired outcome; density, shaven look or scar camouflage.

WILL THE PIGMENT **CHANGE COLOUR**?

No! SMP is a form of permanent cosmetics, but unlike tattooing or permanent makeup, the specialised pigment is designed to maintain the intended colour. The pigment will only lighten, not discolour over time.

DOES IT **HURT**?

Some areas may be more sensitive than others, but most clients remark that even though a small discomfort is felt, it is certainly bearable & not as painful as a traditional tattoo.

HOW MUCH DOES IT **COST**?

The cost will depend upon the balding pattern, scalp area to be covered & (if) any scars are present. Our artists will present you a comprehensive price after your obligation free consultation.

DO YOU HAVE **PAYMENT PLANS**?

Yes! We offer 6 months interest free finance through our partners Zip Money. Ask us for more details or visit the Payment Plans page on our website.

WHY **Foli Sim**?

Foli Sim is a family owned and operated business, specialising in Scalp Micropigmentation.

We pride ourselves on our highly qualified, specialised and friendly team of artists, all of whom are internationally recognised and have trained with global industry leaders.

All of our studios are Heath Department Certified, using modern equipment and following SMP best practices to deliver a premium experience and results that our clients are satisfied with.

We guarantee our treatments, maintaining communication with our clients to ensure your satisfaction, always.

WHAT IS SMP?

SMP (Scalp Micropigmentation) is a natural looking, non-surgical solution for men and women affected by hair loss.

SMP gives you the appearance of greater thickness and natural looking density by using a specially designed needle to apply tiny dots of pigment to the scalp.

These dots replicate the appearance of the natural follicles, making SMP a popular way to restore receded hairlines, cover thinning or bald patches and camouflage scars.

One of the greatest benefits of SMP is that it requires little to no continued maintenance and carries no strict lifestyle or daily restrictions.

Unique from other hair loss treatments which can be costly, SMP is affordable, and the best part is it gives you immediate results.

"My experience with Foli Sim was **faultless**. I was confident I was getting the best **quality** of work and the end result was simply **professional**."
